

PUT CHECK IMAGING AT YOUR MEMBERS FINGERTIPS

That unjust late payment fee, the utility payment mysteriously lost or the tuition payment that has never seemed to have been reconciled. These are three good reasons to offer your members a ready reference to their cancelled check images. Provide them 24/7/365 access from their PC, and you've got a financial tool they can really sink their teeth into.

According to most financial industry experts, check-imaging technology is an investment that must be made to stay competitive. From the member's perspective, imaging is attractive as it reduces paper, yet increases convenience and access to financial records. For those individuals that don't utilize carbon copies or receive their cancelled checks, this service saves time and frustration.

ImageShare™ allows credit unions to offer members fast access to cancelled share drafts directly from the Internet; anytime, anyplace. The system goes beyond other imaging systems, allowing members to view their cancelled check images online, print the image and also e-mail or fax the images directly from the web, eliminating the need for paper and improving image quality. In addition, members are able to request draft changes online, streamlining the adjustment process.

ImageShare™ can be integrated into an existing home banking system, provided as a stand-alone service on the web site, or as a hosted solution for a monthly subscription. ImageShare™ is competitively priced to allow even small credit unions to offer the service to members, thus allowing them to better compete against larger rivals.

ImageShare™ will eliminate the need for credit union staff to manually process members' image requests, saving significant time and money. Credit unions can use the new system regardless of whether they currently offer any on-line banking services. By combining the new imaging system with InetSolution's MemberProtect™ system, credit unions can also take advantage of extraordinary security and complete transaction logging capabilities to ensure accurate image ordering and billing histories for each individual member.

ImageShare™ provides options to allow you to accurately charge members for the check images they view on-line. For credit unions with a low volume of image requests, the monthly imaging report will tell you exactly which members viewed check images. For organizations with larger volumes, you can elect to integrate ImageShare™ into your processing system to allow charges to be posted directly to a member's account.

ImageShare™ will also integrate with our e-statement system, allowing members to not only view checks with the click of a button, but also receive digital copies of all cancelled share drafts with their e-statements each month, free of charge!

IMAGESHARE FEATURES

Online Archive for Prior Year

24/7/365 Access

Access from the Internet

Runs Independent of Branch Intervention

Increases Income Opportunities

Multiple Options for Image Retrieval

Stand-Alone Functionality

BENEFITS

Members can access cancelled check images dating back one full calendar year.

Caters to members' schedules, not branch business hours. Ideal for busy individuals who work first and second shifts where leaving the jobsite is difficult.

Access to images is not limited to a single fax machine or teller window. Check images can be accessed by members from home, work or anywhere a PC is connected to the Internet and is loaded with a web browser.

Allows members to retrieve images without having to set foot into the branch, thus freeing your associates for other mission-critical tasks.

Research indicates that it costs approximately \$1.25 for a teller to process a share draft image request. The cost of an on-line transaction is less than \$.05. If your organization processes 300 image requests per month, you could save over \$300 per month in teller costs alone, not including postage or printing costs!

Check images can be printed or e-mailed to anyone, directly from the Web.

Can even be implemented on a web site even where no home banking applications are in place.

IMAGESHARE REQUIREMENTS

Server: ImageShare can be hosted on our servers, eliminating the need for you to maintain expensive servers. If you wish to host the application, you will require a Windows NT 4.0 or greater server, SQL Server 7.0 or higher and appropriate CPU and storage capacity for the number of images you will store and serve.

Client: Internet Explorer or Netscape Navigator 5.0 or higher

IMAGESHARE SPECIFICATIONS

ImageShare is a server-side application, with a client facing interface. It's secure, using 128-bit encryption and requires a username and password for authentication. This username can be integrated with Symitar and other popular home banking systems.
